PLUMS FINEST HARDY VARIETIES

HISTORY OF OUR BUSINESS

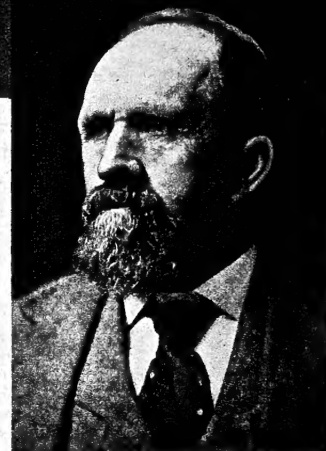

Peter Bohlender Stayed Home While Gold Miners Rushed West to California

In 1849, Peter Bohlender, a poor, young immigrant from Bavaria with no formal education, began growing fruit trees near Dayton, Ohio. Although he founded Spring Hill Nurseries with the smallest of shoe string beginnings he soon became recognized a leader in Horticulture. People found they could depend on his plants. These people told their friends and slowly but surely the fame of the nursery spread.

Today in 1948 we have one of the largest and most modern nurseries, producing over one million plants each year which are shipped to every state in the union.

W. F. Bohlender, son and H. N. Kyle, son-in-law, assumed active management for 33 years. In 1929 Tom Kyle completed his Horticultural schooling at O.S.U. and entered the business as production manager. In 1937 Tom and Howard Kyle, grandsons of the founder, assumed full ownership and management. For three generations or 99 years, the business has been continuously operated. Each generation has had a natural love for plants and all grew up working in the fields.

Plums are easy to grow, often bear big crop 2nd year.

STANLEY PRUNE—8P1. Best for Home or Commercial. This new winter hardy prune is universally the best. Ripens ten days earlier. More thrifty, rapid growing and more productive. Extra large, deep, bluish-purple, sweet, firm and excellent quality.

BURBANK—8P2. Big, bright red plum. Profitable because of big crops, bears young. Trees hardy, vigorous, grow successfully in all sections. Fruit large and of excellent quality, cherry red.

GREEN GAGE—8P3. Delicious, sugary flavor. Nice, big, yellow-green, round plums in great abundance. Because of its rich flavor one of the best for canning and eating. Hardy and productive.

GIANT PRUNE—8P4. Big, blue, freestone. Great big, dark purple with bright blue overcast and sweet, mellow, yellow flesh. Prolific bearer of heavy crops each year.

DIRECTIONS FOR PLANTING FRUIT TREES

Trees should be planted immediately after opening package if possible. Keep roots covered with damp cloth. Do not expose to sun and air. (See cut opposite.) Dig hole large enough so that roots will not be crowded. Make separate pile of fertile top soil. Tree should be planted two inches deeper than grown in nursery. (Notice old soil mark around tree.) Put fertile top soil around roots, breaking up so that there are no air pockets. Fill hole about two-thirds full, pressing earth down firmly. Water well. Fill hole to top. First year a mulch of well-rotted manure or compost should be used to hold moisture and build fertility. Do not let fertilizer or manure come in contact with roots or body of tree.

Instructions For Planting Trees

If possible, plant trees immediately on arrival. In any case keep roots moist. Do not expose to sun and air. 1. Dig hole large enough so that roots will not be crowded, plant 2 inches deeper than soil marks at base of tree. 2. Fill hole half full of rich top soil, firm well and fill hole with water. When water has drained away, fill remainder of hole with balance of dirt. 3. Prune top well back as this helps tree to grow. About once a week water until soil is completely saturated. Wrap trunk with burlap or paper to prevent sun scalding and borers. If tree is large and shaken by wind, stake tree. See illustration at right.

HERE'S WHAT THEY SAY ABOUT "NA-CHURS"

Charles Stegmayer, a wholesale grower of New City, New York, writes.. "We have carefully tested and tried out "Na-Churs" Liquid Fertilizer on various greenhouse crops and have found it very good in all instances. We recommend it highly".

"Just a line to tell you that we found "Na-Churs" to work wonders on our golf course. After 2 treatments the greens, which were in bad shape, came out of it nicely," says Jesse W. Watson of the Mississinewa Country Club, Peru, Ind.

From Columbus, Ohio, Robert L. Maurer, a home owner, writes, "We had really fine results with "Na-Churs" by comparison with our next door neighbor who did not use it. We are pleased in our small scale use of "Na-Churs" and do not hesitate to recommend it."

"In comparison fields where "Na-Churs" and dry fertilizers were used "Na-Churs" fertilized plants were far more advanced and had reached maturity before the dry season thus giving better yield." writes F. L. Hutcherson, Orestes Canning Co., Elwood, Indiana.

How To Plant Evergreens

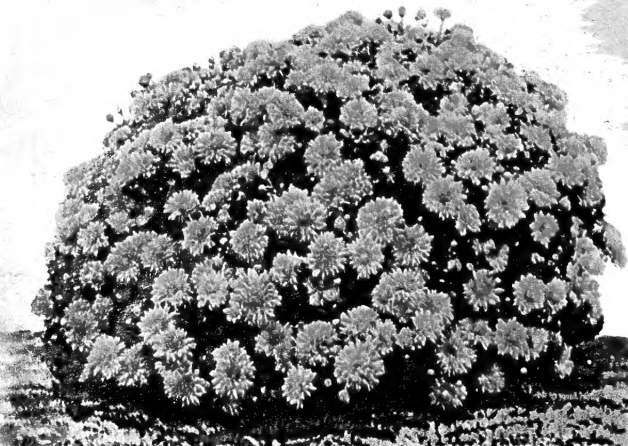

Plant evergreens immediately upon arrival as they have resin in their sap. Keep from sun and air. Dig hole 8 to 10 inches larger than the ball of earth or root spread. Set evergreen 1 to 2 inches deeper than soil marks on the trunk of the evergreen. Fill hole half full of rich top soil, firm well, then fill hole with water.
